481 541

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the crelease of TNF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation or differentiation of condrocyte cells, for stimulating the proliferation of inner ear uritular supporting cells, for stimulating the proliferation of finner ear unitular supporting cells, for stimulating the proliferation of finner ear unitular supporting cells, for stimulating the proliferation of inner ear unitular supporting cells, for stimulating proliferation of finner ear unitular supporting colls, for stimulating proliferation of endochelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for simulating proliferation of endochelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in assertion. A polymucleotide (II) encoding (I) is useful in chromosome condition, and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or chromosome identification, as chromosome marker, and for generating conferencing, as chromosome marker, and for generating conference or natural conference or natural sources. (I) and unimal servible or general cells, tissues or serum, and for a novel human secreted and transmembrane PRO polypeptide. 420 180 480 9 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGGCGCCACCCTCAG GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAATGCACAATTCTATCTCTTGGGCAAT CITCACGGGGTGGCTGTGTGTCTTCCAAGGAGTGCCCGTGCGAGAGGAGTGC GIGCACIAITGACAACCGGGICACCCGGGIGGCCIGGCIAAACCGCAGCACCAICTTA GGTGCAGACAGACACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC GTIGIGICCTICAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC CIICACGGGGCTGGCTGCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGAAGAAGATGC TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCAAAC GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GGTGCAGACAGACAACCAACCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC Gaps ; 0 Query Match

Claim 2; Fig 375; 637pp; English.

The invention describes 30s nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the release of TNF-alpha from human blood, for modulating the uptake of glucose of FRA by skeletal musche cells or adipocyte cells, for stimulating the proliferation of organe expression in pericyte cells, for stimulating the proliferation of organe expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, constimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of adipocyte cells, for stimulating the proliferation of another cells, for stimulating the presence of tumour in a mammal. The tumour is lung, colon, breast, certain grantly and ammal. The tumour is lung, colon, breast, certain grantly early call certain genomic and cDNA mucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful in sample proteins or molecules involved in binding increaction. A polympholectide (II) is considing (I) is useful in chromosome condense mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, itssues or serum, and for generating the expression in specific cells, itssues or serum, and for a movel human secreted and transmembrane PRO polypeptide.

The our

ADB66587 standard; cDNA; 1679 BP ADB66587;

(first entry) 04-DEC-2003 Novel human secreted and transmembrane protein PRO337 cDNA.

Human; secreted and transmembrane protein; PRO; gene; ss;
Tumour necrosis factor alpha release; TNF-alpha release;
Jucose uptake modulator;
cell proliferation stimulator; pro uptake modulator;
cell proliferation stimulator; cytokine release stimulator;
tumour; broaf tumour; prostate tumour; rectal tumour;
cervical tumour; liver tumour; chromosome mapping; gene mapping;
gene therapy; chromosome identification; chromosome marker.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the creases of TNF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of Endoubling the binding of C-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, corresting for isolating genomic and CDNA nucleotide sequence or conditions or interaction. A polymucleotide (II) encoding (I) is useful in the development and interaction of proper proper and gene mapphing, in generating of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome therapy, for chromosome identification, as chromosome marker, and for generating concept or servent of checking the symplession in specific cells, inseres the profice or servent, and (II) are useful for tissue typing. This sequence encodes concept thuman secreted and transmembrane PRO polypeptide.

```

The invention relates to human PRO polypeptides (secreted and transmandrane polypeptides) and the PRO polymucleotides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumnour, rectal tumnour or liver tumnour, breast tumnour, constitution to prostate tumnour, rectal tumnour or liver tumnour) in ammmanl, for stimulating the release of tumnour necrosis factor (TNP) alpha from human blood, for stimulating the proliferation of or gene condrocyte cells, for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene expression in perioyte cells or for stimulating the proliferation of or gene captures in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals or knock-out animals which are useful for preparing a medicament for treating a current captures, in gene therapy, in chromosome identification, as chromosome and surkers and in generating probes. The PRO polypeptides, or anti-PRO antibodies, are useful for preparing a medicament for treating or condition which is responsive to the PRO polypeptides or and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-disorders (e.g. arthritis, sports injuries), involving inducing the re-disordernel electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptides or a useful as ô 120 180 240 240 300 300 360 360 420 420 480 480 9 GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCCTTGCACAAGCTTGAGGAGCAACAC 61 AATCTATCAGGAAAGAAAGAAAAAAAAACCGAACCTGACAAAAAAAGAAGAAAAAGAAG CTTCACGGGGCTGCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGAAGAGAGTGC CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGGCGCCCACCCTCAG CACCITCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCACCCTCAG GCAGTACAGCATCGAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC GTTGTGTCCTTCAGCAAAACAGTGGATTTAAATCTCCTTGCACAGCTTGAGAGCAACAC AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTGGGCAAT CTTCACGGGGCTGGTGTCTGTGTCTTTCCAAGGAGTGCCCGTGCGCAGCAGATGC GIGCACIATIGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA Tectescaatgacaagtestscresarccrescrescrescrescraceaccacccaaac GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGGCCCTTACACCTGCTC . 0 100.0%; Score 1679; DB 1; Length 1679; 100.0%; Pred. (GETH) GENENTECH INC

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polynucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in penerating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful useful in the development and screening of therapeutically useful smelloament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA by skeletal muscle cells, for modulating or the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear unicidular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating

various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobinassociated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polynucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at sequence.html.

New secreted and transmembrane PRO polypeptides and nucleic acids, useful in gene therapy, and in the detection and treatment of tumor in a mammal.

Claim 2; Fig 375; 649pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as colon, breast and in gene therapy. The polymucleotides may also antisense RNA and DNA and in gene therapy. The polymucleotides may also to be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for

```
stimulating differentiation of adipocyte cells, for stimulating the proliferation of or gene expression in periorte cells, for stimulating the proliferation of numer ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports-related joint problems, polypeptides are also useful for treating sports-related joint problems, polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence erpresents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at sequence.html.

```

New secreted and transmembrane PRO polypeptide useful for detecting presence of tumor in a mammal, or modulating the uptake of glucose of free fatty acid by skeletal muscle cells or adipocyte cells.

Gao W;

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (I). (I) is useful for stimulating the transmembrane) polypeptides (I). (I) is useful for stimulating the proliferation or differentiation of chandrocyte cells, for stimulating the proliferation or differentiation of chandrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of for gene expression in pericyte cells, for stimulating the proliferation of for tricular supporting cells, stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of T-lymphocyte cells, for stimulating the proliferation of GT-lymphocyte cells, for stimulating the proliferation of differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligomoleosited probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (I) is also useful as therapeutic agent. PRO is useful

```
in assays to identify other proteins or molecules involved in binding interaction. A polynucleotide (II) encoding (I) is useful in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of RNO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and sorrenhing of therapeutically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(I)-antibody is useful in diagnostic assays for RNO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (I) and (II) are useful for tissue typing. This sequence encodes a novel human secreted and transmembrane PRO polypeptide.
                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                           180
                                                                                                                                                                                                                                                                                                                                                                                                                                       180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                240

The invention describes an isolated PRO (secreted and transmembrane)

CD polypeptide (1). PROS92, PRO1160, PRO1187 or PRO1329 polypeptide are
useful for stimulating the proliferation of compare expression in
Dericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful
CC estimulating the proliferation or differentiation of chondrocyte

(GETH) GENENTECH INC.

Gerritsen ME, Goddard A, Godowski PJ; Smith V, Stephan JF, Watanabe CK, Wood Ā, Baker KP, Desnoyers Grimaldi JC, Gurney Baker KP,

WPI; 2003-657981/62. P-PSDB; ADB87165. One hundred and twenty two nucleic acids encoding PRO polypeptides, useful in gene therapy, chromosome identification, tissue typing, or hybridization probes in chromosome and gene mapping.

Claim 2; Fig 125; 314pp; English.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

Cr the PRO polypeptides) and the PRO polymucleotides encoding them. Cr transmembrane polypeptides are useful as pharmacenticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour) in amammal, for stimulating the release of tumour necrosis factor (TMF) alpha from human cr stimulating the proliferation of or gene conditions to stimulating the proliferation of or gene conditions probes, in chromosome and gene mapping, in generating cr stimulating the proliferation of or gene chorises NA and DNA, in preparing PRO polypeptides by recombinant technology, in generating transgenic animals which any be used in the development and screening of therapeutically useful creagents, in gene therapy in chromosome and gene mapping, in generating probes. The PRO polypeptides, or anti-PRO may be used in the development and screening of therapeutically useful creagents, in gene therapy, in chromosome identification, as chromosome creagents, in gene therapy, in chromosome and sendicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, are useful for preparing a medicament for treating a condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. archritis, sports injuries), involving inducing the redifferentiation of chondrocytes. The PRO polypeptides are useful as molecular markers a human PRO polypeptides are useful.

WPI; 2003-777259/73. P-PSDB; ADB84747.

New isolated PRO polypeptides, useful for tissue typing, gene therapy, as molecular weight markers in protein electrophoresis, and for treating arthritis and tumors.

Claim 2; Fig 125; 308pp; English

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polypeptides encoding them.

The PRO polypeptides and polymucleotides are useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TMF)-alpha from human constituting the proliferation or differentiation of condrocyte cells, for stimulating the proliferation of or gene capturecyte cells for stimulating the proliferation of or gene capturecyte cells for stimulating the proliferation of condrocyte cells, for stimulating the proliferation of or gene capturession in perioque cells for stimulating the proliferation of or gene capturession in perioque in or stimulating the proliferation of or gene captures RNA and DNA, in preparing PRO polypeptides by recombinant cells antisense RNA and DNA, in preparing PRO polypeptides by recombinant cells and in generating transgenic animals of therapeutically useful reagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartilage contition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as perioyre-associated tumours and bone and/or cartilage consistion markers for protein electrophoresis, and in tissue typing. This sequence represents a human PRO polypeptides of the invention.

```
The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the uptake of release of TWT-alpha from human blood, for modulating the uptake of glucose or FPA by skeletal musch cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the proliferation of inner ear utricular supporting cells, for stimulating the release of a cytokine from PBMC cells, for inhibiting the binding of A-peptide to factor VIIA, for inhibiting the differentiation of adipocyte cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, prostate, rectal, cervical or liver tumour. The oligomucleotide probes are unisense probes. (1) is also useful as therapeutic agent. PRO is useful in assays to identify other proteins or molecules involved in binding in assays to identify other proteins or molecules involved in chromosome and gene mapping, in generation of antisense RNA and DNA, in the preparation of PRO polypeptide, for generating transgenic animals or

knockout animals which in turn are useful in the development and screening of therapetuically useful reagents, in gene therapy, for chromosome identification, as chromosome marker, and for generating probes. An anti-(1)-antibody is useful in diagnostic assays for PRO, e.g. detecting its expression in specific cells, tissues or serum, and for affinity purification of PRO from recombinant cell culture or natural sources. (1) and (11) are useful for tissue typing. This sequence encodes

New secreted and transmembrane PRO polypeptides, useful in the diagnosis and treatment of cancer.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, corp. polymucleotides are useful in nolecular biology, including uses as the polymucleotides are useful in molecular biology, in generating corp. The polymucleotides may also a strisense RNA and in gene therapy. The polymucleotides may also considered in preparing PRO polypeptides by recombinant techniques and in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of xnock-out animals which are useful in the development and screening of xnock-out animals which are useful of trating a tumous, for suminating inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or PRA by skeleral muscle cells, for stimulating differentiation of adipocyte cells, for stimulating cells or grant using the proliferation of inner ar utricular supporting cells, for stimulating the proliferation of inner ar utricular supporting cells, for stimulating cells or training endothelial cell tube formation and for treating cells, for inducing endothelial cell tube formation and for treating cells, for mediane and/or cartilage defects, osteoarthities and returning and returning species of genuence represents a human PRO polymucleotide of the invention. Note: cells from uspro a teapdat

(GETH) GENENTECH INC.

Gerritsen ME, Goddard A, Godowski PJ; Smith V, Stephan JF, Watanabe CK, Wood Desnoyers L, Baker KP, De Grimaldi JC,

2003-777258/73. P-PSDB; ADB73017 Novel isolated PRO polypeptide useful for tissue typing, gene therapy, molecular weight markers, for treating arthritis, tumor.

Claim 2; Fig 125; 308pp; English

The invention describes an isolated PRO (secreted and transmembrane) bolygeptide (1). PRO982. PRO1160, PRO1187 or PRO1329 polygeptide are useful for stimulating the proliferation of or gene expression in pericyte cells. PRO357, PRO229, PRO1272 or PRO4405 polypeptide are useful for stimulating the proliferation or differentiation of chondrocyte cells. PRO357, PRO357, PRO1155, PRO1155, PRO11519 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF)-

alpna irom human blood. The present invention relates to the isolation of novel human PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are secreted and transmembrane proteins. The PRO polypeptides are useful for detecting other PRO polypeptides, for linking bioactive molecules to cells expressing PRO polypeptides, for modulating biological activities of cells expressing PRO polypeptides, for modulating identifying agonists or antagonists. The bioactive molecule maybe a toxin, radiolabel or antibody, and cause cell death. The PRO polypeptides are useful for treating neuropathy and neuropathy related diseases such as Charcot-Marie-Tooth disorder, Refsuw's disease, and Krabbe's disease. The polymucleotide sequences encoding PRO polypeptides are useful as hybridisation probes, in chromosome and gene mapping, in the generation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New PRO polypeptides useful for treating peripheral neuropathy, neuropathies associated with systemic disease such as post-polio syndrome or AIDS-associated syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ashkenazi AJ, Baker KP, Botstein D, Desnoyers L, Eaton DL, Ferrara N, Filvaroff E, Fong S, Gao W, Gerber H, Gerritsen ME; Goddard A, Godowski PJ, Grimaldi JC, Gurney AL, Hillan KJ; Kljavin IJ, Kuo SS, Napier MA, Pan J, Paoni NF, Roy MA, Shelton Stewart TA, Tumas D, Williams PM, Wood WI;

```
The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an artibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the polification or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also

be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful reagents. The PRO polypeptides or antibodies are used in preparing a catiodies, and a strandaring and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucose or FPA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in periotyte cells, for stimulating the proliferation of inner ear utricular supporting cells or 1-lymphocyte cells, for inducting endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and artilage are useful for treating sports related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides warious thelasseamias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note:

The sequence are present a human PRO polymucleotide of the invention format 300 360 420 420 480 480 120 180 180 300 120 9 CACCTTCCCCAAAGCTATGGACAAGGTGACGGTCGGCAGGGAGAGAGGCGCCACCTCAG GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACGCAGCACCATCCTCTA GCAGTACAGCATCGAGATCCAGAACGTGGATGTGTATGACGAGGCCCTTACACCTGCTC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC 541 CAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC 121 AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGACAATTCTATCTCTTGGGCAAT TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCAAAC GGIGCAGACAGACACCCAAAGACCTCTAGGGICCACCTCATGIGCAGGAAGTATCTCC GGTGCAGACAGACAACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CTTCACGGGGCTGCTCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAGATGC 241 CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGAGAGCGCCACCCTCAG GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTTA GCAGTACAGCATCGAGATCCAGAACGTGGATGTATGACGAGGGCCCTTACACTGCTC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCTCCCAAAGC AAGAAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT GITGTGTCCTTCAGCAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC 1 GTTGTGTCCTTCAGCAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGCAACAC Gaps ; 100.0%; Score 1679; DB 1; Length 1679; 100.0%; Pred. Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the recting the presence of a tumour in a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, proseate, rectal, kidney, cervical and liver tumours). The colon, breast, proseate, rectal, kidney, cervical and liver tumours). The colon, breast, probes, in chromosome and gene mapping, in generating antiense RNA and DNA and in gene therapy. The polymucleotides may also contise to the proporting PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development and screening of therapeutically useful caseful in the development of edition responsive to the polypeptides or antibodies are useful in a tumours, for stimulating and inhibiting proliferation of of nymborises of stimulating differentiation of adipocyte cells, for stimulating cells or of human microvaccular endothelial cells or adipocyte cells, for stimulating endothelial cells or adipocyte cells, for stimulating endothelial cells useful are supporting or proliferation of independent are uniquely expression in pericyte cells, for stimulating endothelial cells to as sports injunities and arthrities and rheumatoid arthrities and rheumatoid arthrities and rheumatoid arthrities arthrities are useful for treating sports-related joint problems, arthritials energy energet energy expression and proceoglycan arthrities proper

ADB35596 standard; cDNA; 1679 RESULT 20 ADB35596 ID ADB3 1020

                                                                                                                                                                                                                                                                                                                                                                                                                                       360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      420
                                                                                                                                                                                                                                                             AAGAAAAAATCATGAAAACCATCCAGCCAAAATGCACAATTCTATCTCTTGGGCAAT 180
                                                                                                                                                                                                              polypeptides are also useful for treating various mammalian haemoglobin-
associated disorders such as various thalassaemias and conditions which
may benefit from enhanced local immune system cell infiltration. This
sequence represents a human PRO polynucleotide of the invention. Note:
The sequence data for this patent is also available in electronic format

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrean). Lumour of proliferation or date to a certical and in emethod for consideration probes, in chromosome and gene mapping, in generating the presence of a full in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating consideration probes in the development end screenbinant techniques and in the development and screenbinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screenbing of therspoutical may also creagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of multipodies, such as tumours, for stimulating and inhibiting proliferation of stimulating and inhibiting proliferation of stimulating of increating and inhibiting and inhibiting constitutions because and or gene expression in pericyte cells, for stimulating differation of inner ear utricular supporting cells or T-lymphocyte cells, for inducing endothelial cells to adipocyte cells, for stimulating and constitution and constitution and cartilage are useful for treating various mammalian hammoloohin-associated disorders such as various thalassemias and condition. The sequence captered to streating various mammalian hammoloohin-associated disorders such as various thalassemias and condition. The sequence captes of properties of the invention. Note: The sequence represents a human PRO polymorelede of the invention. The sequence represents a human P v secreted and transmembrane PRO polypeptides and nucleic acids, useful gene therapy, in chromosome and gene mapping, as chromosome markers, tissue typing, and in identifying chromosomes. New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors.

Claim 2; Fig 375; 638pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNP-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adremal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses a polymucleotides are useful in molecular biology, including uses a polymucleotides are useful in molecular biology, including uses a polymucleotides are useful in molecular biology, including uses a constraint of the properties by preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening or knock-out animals which are useful in the development and screening or antibodies are used in preparing a condition responsive to the polypeptides or antibodies are used in preparing of human microvascular endothelial cells, for modulating the uptake of stimulating differantiation of alphocyte cells, for stimulating differantiation of alphocyte cells, for stimulating differation of alphocyte cells, for stimulating and confirming proliferation of anothelial cells or adipocyte cells, for stimulating differation of alphocyte cells, for stimulating and confirming endothelial cells or associated fiscates such as various mammals and condition. The sequence represents a human PRO polymucleotide or the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at sequence response.

WPI; 2003-755075/71. P-PSDB; ADB36149 New isolated, secreted and transmembrane PRO polypeptides and nucleic acids, useful for the diagnosis, prevention and/or treatment of tumors, such as lung, colon, breast, prostate, rectal, cervical and/or liver tumors.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the profileration or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colling, the profileration probes, in chromosome and gene mapping, in generating of hybridisation probes, in chromosome and gene mapping, in generating a theisense RNA and DNA and in game therapy. The polymucleotides may also a trisense RNA and DNA and in game therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful cagents. The PRO polypeptides or antibodies are used in preparing of medicament for treatings condition responsive to the polypeptides or antibodies are used in preparing of medicament for treating a condition responsive to the polypeptides or antibodies are used in preparing of for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of adipocyte cells, for stimulating and condition treating cells or treating cells, for the proliferation of function of adipocyte cells, for stimulating and carthides are also useful for treating various mammalian haemoglobin-cells, for inducing endothelial cell tube formation and for treating cells or adipocyte cells, for mentanced disorders such as various mammalian haemoglobin-cells in secondated disorders such as various thalassaemas and condition. For matching a buman PRO polymedecide of the invention. Note: The sequence represents a human PRO polymedecide of the invention.

The invention describes 305 nucleic acids encoding PRO (secreted and transmembrane) polypeptides (1). (1) is useful for stimulating the criatase of TWF-alpha from human blood, for modulating the uptake of glucose or FFA by skeletal muscle cells or adipocyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of or gene expression in pericyte cells, for stimulating the proliferation of I-lymphocyte cells, for stimulating the proliferation of inner ear utricular supporting cells, cor stimulating the proliferation of inner ear utricular supporting cells, cor stimulating the proliferation of inner ear utricular supporting cells, cor stimulating proliferation of I-lymphocyte cells, for stimulating proliferation of endothelial cells, for stimulating the proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, cells, for stimulating proliferation of endothelial cells, for detecting the presence of tumour in a mammal. The tumour is lung, colon, breast, correstly cervical or liver tumour. The oligonucleotide probes are useful for isolating genomic and cDNA nucleotide sequences or antisense probes. (1) is also useful should be probes are mapping, in generation of antisense RNA and DNA, in the correction of PRO polypeptide, for generating transgenic animals or knockout animals which in turn are useful in the development and correcting its expression in generating cransgens. An anti-(1)-antibody is useful in diagnostic assays for PRO, e.g. chromosome identification, as chromosome marker, and for generating cransgenic animals or chromosome identification, as chromosome marker, and for generating cransgenic animals which in turn are useful in diagnostic assays for PRO, e.g. chromosome identification, as chromosome encodes caffinity purification of RNO from recombinant cells, tissues or serum.

CC a novel human secreted and transmembrane PRO polypeptide.

Novel secreted and transmembrane polypeptides and polymucleotides encoding them, useful for treating wound healing, tissue growth and muscle generation and regeneration, amyotrophic lateral sclerosis or neuropathy.

NO 522; 472pp; English Ω Claim 2; SEQ

The invention describes an isolated secereted and transmembrane PRO

To polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615

CC is useful in biotechnological and medical research, as well as in various

industrial applications. PRO polypeptide such as PRO300, PRO866, PRO703,

PRO600 or PRO646 is useful for therapeutic purposes. PRO6618, PRO772, PRO653,

CC PRO600 or PRO646 is useful for therapeutic purposes. PRO361, pro672, PRO653,

CC tharapeutically in vivo for lessening the effects of viral infection.

CC RO200 is useful for the treatment of wound healing, tissue growth and

muscle generation and regeneration. PRO337 is useful for treating

amyotrophic lateral sclerosis, neuropathy, AIDS-associated neuropathy or

CC diabetic peripheral neuropathy. A polynucleotide (II) encoding (I) is

cuseful for generating transgenic animals or knockout animals which are

cuseful in the development and screening of therapeutically useful

creagents, as probes for generating a pool of sequences for identifying

creagents as probes for generating a pool of sequences for identifying

creagents as probes for generating a pool of sequences for identifying

creagents as probes for generating a pool of sequences for individuals which encodes the PRO and for the genetic analysis of

individuals with genetic disorders, for recombinantly expressing (I) and

CC for chromosome identification. (I) is useful as molecular marker for

created for screening compounds to identify those that mimic the PRO

created for generating compounds to identify those that mimic the PRO

created for immunohistochemical staining and/or assay of sample

created in the sequence encodes a human seceretid and transmembrane PRO

created an encodes a human seceretid and transmembrane PRO ö CACCTTCCCAAAGCTATGAACAACGTACGGTCCGGCAGGGGGAGAGCGCCACCCTCAG 300 CTTCACGGGGCTGGCTCTGTGTCTCTTCCAAGGAGTGCCCGTGCGCAGCGGAGAGTGC 240 GIGGACTATIGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCAICCTCTA 360 480 480 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT 180 GGTGCAGACAGACACCCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGAACAATATTAGCCTCAC GGTGCAGACAGACCACCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 0; Gaps Query Match

New isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines.

Claim 2; SEQ ID NO 522; 467pp; English.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal

```
The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequences as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide). Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acid), a host cell comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO polypeptide is useful for detecting a PRO4993 polypeptide is useful for detecting a PRO4993 polypeptide. Similarly, PRO4993 polypeptide is useful for detecting PRO37 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  180

Stewart TA, Tumas D, Williams PM, Wood WI;

Novel isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines.

The invention relates to an isolated PRO polypeptide (secreted or transmembrane protein) having at least 80% amino acid sequence identity to an amino acid sequence chosen from 94 fully defined sequence as given in the specification (including PRO lacking its associated signal peptide, a PRO extracellular domain with or without its associated signal peptide, Also included are nucleic acids encoding the PRO proteins mentioned above, a vector comprising a PRO nucleic acids comprising the vector and producing PRO, a chimaeric molecule comprising PRO fused to a heterologous amino acid sequence, and an anti-PRO antibody. PRO337 polypeptide is useful for detecting a PRO4993 polypeptide in a sample suspected of containing PRO4933 polypeptide.

(GETH)

The invention describes an isolated secereted and transmembrane PRO polypeptide (I). PRO polypeptide such as PRO213, PRO700, PRO320 or PRO615 is useful in biotechnological and medical research, as well as in various industrial applications. PRO polypeptide such as PRO300, PRO666, PRO703, PRO860 or PRO815, PRO351, PRO351, PRO615, PRO618, PRO616, PRO772, PRO655 pRO606 or PRO846 is useful for therapeutic purposes. PRO363 is useful therapeutically in vivo for lessening the effects of viral infection. PRO200 is useful for the treatment of wound healing, tissue growth and muscle generation and regeneration. PRO337 is useful for treating 240 480 480 540 540 600 Novel isolated secreted and transmembrane PRO polypeptides, useful in the preparation of a medicament for treating a condition responsive to the polypeptide, and as therapeutic agents e.g. vaccines.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polynucleotides encoding them. The PRO polypeptides and polynucleotides are useful as pharmaceuticals, diagnostics, blosensors or bioreactors. They are particularly useful for detecting tumours (e.g. lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour) in a mammal, for stimulating the release of tumour necrosis factor (TNF)-alpha from human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, PRO; gene, ss; secreted polypeptide; transmembrane polypeptide, tumour; cancer; lung; colon; breast; prostate; rectum; liver; tumour necrosis factor-alpha; TNF-alpha; blood; chondrocyte cell; pericyte cell; dermal fibroblast; bone disorder; cartilage disorder; arthritis; sports injury; cytostatic; antiarthritic.

blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of normal human dermal fibroblasts. The PRO nucleic acids are useful as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA, in preparing PRO polypeptides by recombinant.

The invention relates to human PRO polypeptides (secreted and transmembrane polypeptides) and the PRO polymucleotides encoding them.

Cransmembrane polypeptides and the PRO polymucleotides encoding them. diagnostics, biosensors or bioreactors. They are particularly useful as pharmaceuticals, diagnostics, biosensors or bioreactors. They are particularly useful for detecting tumour, rectal tumour or liver tumour) in a mammal, for stimulating the proliferation or differentiation of blood, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of chondrocyte cells, for stimulating the proliferation of or gene expression in pericyte cells or for stimulating the proliferation of or gene chondrocyte cells, in chromosome and gene mapping, in generating transgenic animals or knock-out animals which technology, in generating transgenic animals or knock-out animals which reagents, in gene therapy, in chromosome identification, as chromosome condition which is responsive to the PRO polypeptides, or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage condition which is responsive to the PRO polypeptides or anti-PRO antibodies, such as pericyte-associated tumours and bone and/or cartilage disorders (e.g. arthritis, sports injuries), involving inducing the re-condition of chondrocytes. The PRO polypeptides are useful as modecular markers for protesine electrophoresis, and in tissue typing. This equence represents a human PRO polypeptide, and in tissue typing. This
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TMF-alpha) from human blood, a method for stimulating proliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polynucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; secreted and transmembrane protein; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TNF-alpha; chondrocyte; tumour; cancer; adremal; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose uptake modulator; FFA uptake modulator; cell proliferation; cell differentiation; skeletal muscle cell; adsporte cell; encicyte cell; inner ear utricular supporting cell; rinpocyte cell; encodebial cell tinner ear utricular supporting cell; T-lymphocyte cell; sporte injury; proteoglycan; articular cartilage defect; osteoarthritis; sporte injury; proteoglycan; articular cartilage defect; osteoarthritis; rheumatoid arthritis; haemoglobin-associated disorder; thalassaemia; immune system cell infiltration; chromosome mapping; gene mapping; gene therapy; chromosome identification; chromosome marker; gene; ss.

WPI; 2003-801172/75. P-PSDB; ADC71964. New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, a method for stimulating the colon, breast, prostate, rectal, kidney, cervical and alver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating antisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful canent for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of flucose or FRA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differential of adipocyte cells, for stimulating proliferation of expression in pericyte cells, for

T-lymphocyte cells, for inducing endothelial cell tube formation and for T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are useful for treating sports-related joint problems, articular cartilage defects, osteoarthritis and rheumatoid arthritis. PRO polypeptides are also useful for treating various mammalian haemoglobin-associated disorders such as various thalassaemias and conditions which may benefit from enhanced local immune system cell infiltration. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this patent is also available in electronic format from USPTO at seqdata.uspto.gov/sequence.html. 120 240 300 360 420 420 480 480 540 540 900 900 99 99 720 720 780 780 840 180 180 240 GIGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA 360 9 9 1 GITGIGICCITCAGCAAAACAGTGGATTTAAATCTCCTTGCACAAGCTTGAGAGCAACAC GTIGITCCTTCAGCAAAACAGTGGATTTAAATCTCCCTTGCACAAGCTTGAGAGCAACAC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC GGTCACCGTGAACTATCCACCATACATTTCAGAAGCCAAGGGTACAGGTGTCCCCGTGGG 181 CTTCACGGGGCTGGCTGCTCTGTGTCTCTTCCAAGAGTGCCCGTGCGCAGCGGAGATGC CACCTTCCCCAAAGCTATGGACAACGTGACGGTCCGGCAGGGGGGAGAGCGCCACCCTCAG TGCTGGGAATGACAAGTGGTGCCTGGATCCTCGCGTGGTCCTTCTGAGCAACACCCCAAAAC GGTGCAGACAGACAACCACCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC CAAAATTGTAGAGATTTCTTCAGATATCTCCATTAATGAAGGGAACAATATTAGCCTCAC CTGCATAGCAACTGGTAGACCAGAGCCTACGGTTACTTGGAGACACATCTCCCCAAAGC GGTTGGCTTTGTGAGTGAAGACGAATACTTGGAAATTCAGGGCATCACCCGGGAGCAGTC AGGGGACTACGAGTGCCTCCAATGACGTGGCCGCCCCGTGGTACGGAGAGTAAA GTGCACTATTGACAACCGGGTCACCCGGGTGGCCTGGCTAAACCGCAGCACCATCCTCTA gcaeracacerceagarceagacercagarererareaceagesecerracacere GGTGCAGACAGACCACCCCAAAGACCTCTAGGGTCCACCTCATTGTGCAAGTATCTCC 121 AAGAAAAAATCATGAAAACCATCCAGCCAAAAATGCACAATTCTATCTTTGGGCAAT 181 CTTCACGGGGCTGGCTGCTCTGTGTCTTTCCAAGGAGTGCCCGTGCGCAGCGAGATGC GCAGTACAGCATCGAGAACGTGGATGTGTATGACGAGGGCCCTTACACTGCTC Gaps .; Length 1679; Sequence 1679 BP; 498 A; 432 C; 419 G; 330 T; 0 U; 0 Other; Indels Query Match 100.0%; Score 1679; DB 1; Best Local Similarity 100.0%; Pred. WPI; 2003-801170/75. P-PSDB; ADC59943. New secreted and transmembrane nucleic acids and polypeptides, designated as PRO, useful for treating inflammation, organ failure, atherosclerosis, cardiac injury, infertility, birth defects, premature aging, AIDS, or cancer

Claim 2; Fig 375; 637pp; English

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polynucleotides encoding them. The invention also relates to an antibody which specifically binds to a PRO invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the presence of a tumour in a mammal (e.g. adrean), lung, detecting the presence of a tumour in a mammal (e.g. adrean), lung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polyuncleotides are useful in molecular biology including uses as thybridisation probes, in chromosome and gene mapping, in generating of phypridisation probes, in chromosome and gene mapping, in generating captions to probe the proparing PRO polypeptides by recombinant techniques and in captisence RNA and BNA and in gene therapy. The polyuncleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful in the development and screening of knock-out animals which are useful stransgenic and transgenic allowed in preparing a condition responsive to the polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or captions of manner ear utricular supporting proliferation of simulating and inhibiting proliferation of simulating and inhibiting proliferation of simulating of proliferation of inner ear utricular supports cells or simulating the proliferation of inner ear utricular supports cells or treating various bone and/or cartilage defects, osteoarthritis and rhemmatoid or arthritis and arthritis. PRO polypeptides which simulate the release of problems, articular cartilage are also useful for treating sports related joint antilitration. This sequence represents a thuman PRO polymput or propolycans from cartilage are also useful f

The invention describes an isolated PRO (secreted and transmembrane)

Useful for stimulating the proliferation of or gene expression in

Deriverte cells. PRO357, PRO329, PRO1150, PRO11529 polypeptide are

useful for stimulating the proliferation of or gene expression in

CC cells. PRO357, PRO329, PRO3155, PRO3156 or PRO41919 polypeptide

are useful for stimulating the proliferation of deformation of chondrocyte

calpha from human blood. PRO932, PRO3157, PRO319, PRO3191, PRO314,

PRO247, PRO337, PRO526, PRO3106, PRO1057, PRO1011, PRO1191, PRO314,

PRO178, PRO1134, PRO826, PRO3106, PRO1057, PRO1701, PRO1119, PRO314,

PRO1786, PRO1134, PRO826, PRO1065, PRO1937, PRO1274, PRO1274, PRO1309,

PRO1887, PRO1134, PRO3126, PRO1305, PRO1937, PRO1379, PRO1340, PRO338,

PRO1887, PRO1387, PRO3387, PRO3409, PRO1937, PRO1379, PRO1340, PRO338,

PRO1887, PRO1388, PRO1194, PRO1937, PRO1937, PRO4322, PRO3481,

PRO9940, PRO6079, PRO9886 or PRO11096 polypeptide are useful for

stimulating the proliferation of normal human dermal fibroblasts cells.

PRO5723, PRO5725, PRO7154, or PRO19272, PRO4788, PRO4932, PRO4984,

PRO5723, PRO5725, PRO7154, or PRO4225, PRO7788, PRO4322, PRO4984,

CC Inhibiting the proliferation of normal human dermal fibroblast cells. PRO5723, PRO5725, PRO7154, or PRO4225, PRO7788, PRO4322, PRO4988,

CC In a test sample of calls taken from the above PRO polypeptides

on namel cells of the same cell type, where a higher level of expression of the above PRO polypeptides in the test sample as compared to the control sample of normal cells of the mammal. The tumour in a mammal tumour of the above PRO polypeptides in the test sample as compared to the control sample tumour in the mammal The tumour of tumour in the mammal sumour tumour to the above properties in the test sample as compared to the control sample tumour in the mammal The tumour of tumour in the mammal The tumour of tumour in the mammal of tumour in the mammal tumour to the presence of tumour in the mammal tumour tumour tumour tumour tumour tumour tumour tum rumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynucleotide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for generating transgenic animals or knock-out animals which are useful screening useful reagents. PRO357, PRO259, PRO1272 or PRO405 polyneptide is useful for trating bone and/or artilage disorders (e.g., arthritis, sport injuries). This sequence encodes a human secreted and transmembrane invention describes an isolated PRO (secreted and transmembrane)

C The invention describes an isolated PRO (secreted and transmembrane)

C polypeptide (1). PRO982, PRO180, PRO1807 or PRO1329 polypeptide are useful for stimulating the proliferation of or gene expression in percyte ceals. PRO357, PRO229, PRO1307 or PRO405 polypeptide are useful for stimulating the proliferation of differentiation of chondrocyte cells. PRO357, PRO357, PRO135 or PRO1419 polypeptide are useful for stimulating the release of tumour necrosis factor (TNF).

inhibiting the proliferation of normal human dermal fibroblast cells. PRO polypeptides such as PRO6004, PRO4991, PRO174, PRO5778, PRO4332, etc., are useful for detecting the presence of tumour in a mammal which in a test sample of cells taken from the mammal, and a control sample of converse comparing the level of expression of the above PRO polypeptides in a test sample of colls taken from the mammal, and a control sample of che properties in the test sample as compared to the control sample of the PRO polypeptides in the test sample as compared to the control sample is indicative of the presence of tumour in the mammal. The tumour is lung tumour, colon tumour, breast tumour, prostate tumour, rectal tumour or liver tumour. (I) is useful as molecular weight markers, for tissue typing, or as therapeutic agents. A polynuclectide (II) encoding (I) is useful for chromosome and gene mapping or gene therapy. (II) is useful for carening useful reagents. PRO357, PRO329, PRO1272 or PRO4405 polypeptide is useful for treating bone and/or cartilage disorders (e.g., arthritis, proceeding injuries). This sequence encodes a human secreted and transmembrane

New PRO nucleic acid, useful for manufacturing a medicament diagnosing or treating tumor.

Claim 2; SEQ ID NO 375; 637pp; English.

This invention relates to novel nucleic acids encoding human PRO secreted
and transmembrane proteins. Extracellular proteins play important roles
to the formation, differentiation and maintenance of multiculular
corganisms. The fate of many individual cells (for example proliferation,
corganisms. The fate of many individual cells (for example proliferation,
migration or differentiation) is typically governed by information
corporated from orcher cells and the immediate environment. The information
is often transmitted by secreted polypeptides (for example mitogenic
factors, survival factors, cytotoxic factors, differentiation factors,
neuropeptides and homenes) which are received and interpreted by diverse
cell receptors or membrane bound proteins. These membrane bound proteins
and receptors may be of use as pharmaceutical and diagnostic agents, such
and receptors may be of use as pharmaceutical and diagnostic agents, such
corporates the amino acid sequences of novel human membrane bound receptors
and proteins, along with the CDNA sequences encoding them. The novel
corportion of chondrocytes. The nucleic acids of the invention may be
stimulation of chondrocytes. The nucleic acids of the invention may be
cuseful for the manufacture of a medicament for diagnosing or treating a
tumour in a mammal. In addition, they may be useful for measuring or
detecting the expression of a tumour associated gene. The present
corporation of the manufacture of a tumour associated gene. The present

This invention relates to mover muchale actors play important roles in the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, survival factors, cytotoxic factors, differentiation factors, enviropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins can receptors as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention proteins along with the cDNA sequences necoding them. The novel proteins along with the cDNA sequences modified activities through the stimulation of chondrocytes. The nucleic actids of the invention may be the stimulation of chondrocytes. The nucleic actids of the invention may be the under in a mammal. In addition, they may be useful for measuring or the expression of a tumour associated gene. The present continuation of the continuation of a tumour associated gene. The present continuation of the continuation of a tumour associated gene. The present continuation of the continuation of a tumour associated gene. The present continuation of the continuation of a tumour associated gene. The present continuation of the continuation of the continuation which encodes a human PRO protein of the

invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpa (TNF-alpan) from human blood, a method for stimulating the proliferation or differentiation of chondrocyte cells and a method for condition, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymucleotides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating a attisense RNA and DNA and in gene therapy. The polymucleotides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of therapeutically useful responsive to the polypeptides or medicament for treating accenting a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of thuman microvascular endothelial cells, for modulating the uptake of glucose or FRA (free fatty acid) by skeltal musche cells, for stimulating differentiation of adipocyte cells, for stimulating differentiation of animose or FRA (free fatty acid) by skeltal musche cells, for stimulating the proliferation of inner ear utricular supporting cells, or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of prochems, articular cartilage defects, osteoathritis and rheumatoid cartilage are also useful for treating various conditions which may benefit from enhanced local immune system cell infiltration. Note: The sequence expresents a human PRO polypeptides are also useful for treating various of the infiltration. The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polypuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TNR-alpha) from human blood, a method for stimulating the presence of a tumour in a mammal (e.g. adrenal, und, colliferation or differentiation of chondrocyte cells and a method for detecting the presence of a tumour in a mammal (e.g. adrenal, ung, colon, breast, prostate, rectal, kidney, cervical and liver tumours). The polymuclectides are useful in molecular biology, including uses as hybridisation probes, in chromosme and gene mapping, in generating christense RNA and DNA and in gene therapy. The polymuclectides may also be used in preparing PRO polypeptides by recombinant techniques and in generating either transgenic animals or knock-out animals which are useful in the development and screening of the responsically useful reagents. The PRO polypeptides or antibodies are used in preparing a condition responsive to the polypeptides or Euman; secreted and transmembrane protein; PRO; secreted polypeptide; transmembrane polypeptide; tumour necrosis factor-alpha; TNF-alpha; chondrocyte; tumour; aaraer; adrean; lung; colon; breast; prostate; rectum; kidney; cervix; liver; microvascular endothelial cell; glucose uptake modulator; FFA uptake modulator; cell proliferation; pericyte cell; inner ear utricular supporting cell; those formation; bone disorder; cartilage disorder; endothelial cell tube formation; bone disorder; cartilage disorder; rheumatoid arthritis; haemoglobin-associated disorder; thalassaemia; immune system cell infiltration; chromosome mapping; gene mapping; gene therapy; chromosome identification; chromosome marker; gene; ss. PRO nucleic acid, useful for preparing a recombinant PRO polypeptide for manufacturing a medicament for diagnosing or treating tumor. 3 Gao Baker KP, Beresini M, Deforge L, Desnoyers L, Filvaroff E, Ge Gerritsen ME, Goddard A, Godowski PJ, Gurney AL, Sherwood S; Smith V, Stewart TA, Tumas D, Watanabe CK, Wood MI, Zhang Z; Novel human secreted and transmembrane protein PRO337 cDNA. antibodies, such as tumours, for stimulating and inhibiting proliferation of human microvascular endothelial cells, for modulating the uptake of glucoses or FFA (free fatty acid) by skeletal muscle cells or adipocyte cells, for stimulating differentiation of adipocyte cells, for adipocyte cells, for stimulating proliferation of or gene expression in pericyte cells, for trimulating the proliferation of inner ear unfoular supporting cells or T-lymphocyte cells, for inducing endothelial cell tube formation and for treating various bone and/or cartilage disorders such as sports injuries and arthritis. PRO polypeptides which stimulate the release of proteoglycans from cartilage are useful for treating sports elated joint problems, articular cartilage are useful for treating various mammalian hemmoglobin-associated disorders such as various thalassemias and conditions which may benefit from enhanced local immine system cell inflitation. This sequence represents a human PRO polymucleotide of the invention. Note: The sequence data for this parent is also available in clectronic format from USPTO at seqdata.uspto.gov/sequence.html.

WPI; 2003-801147/75. P-PSDB; ADC65497. New PRO nucleic acid, useful for manufacturing a medicament for diagnosing or treating tumor.

Claim 2; Fig 375; 637pp; English.

The invention relates to isolated human PRO polypeptides (secreted and transmembrane polypeptides) and the polymuclectides encoding them. The invention also relates to an antibody which specifically binds to a PRO polypeptide, a method for stimulating the release of tumour necrosis factor-alpha (TWF-alpha) from human blood, a method for stimulating the factor-alpha (TWF-alpha) from human blood, a method for stimulating the conformation of differentiation of chondrocyte cells and a method for optimulating the presence of a tumour in a mammal (e.g. adrenal, lung, certain, problem, in chromosome and gene mapping, in generating to polymuclectides are useful in molecular biology, including uses as hybridisation probes, in chromosome and gene mapping, in generating and integers transgenic animals witch are generating either transgenic animals or knock-out animals which are generating either transgenic animals or knock-out animals which are generating either transgenic animals or knock-out animals which are generating either transgenic animals or knock-out animals which are medicament for treating a condition responsive to the polypeptides or medicament for treating a condition responsive to the polypeptides or antibodies, such as tumours, for stimulating and inhibiting proliferation of stimulating differentiation of adipocyte cells, for stimulating proliferation of sumer ear uricular supporting cells, for stimulating proliferation of inner ear uricular supporting cells, for stimulating articular are artilage are useful for treating sporte release of processly articular artilage defects, or treating various bone and/or cartilage defects, or treating various mammalian haemoglobin-articular cartilage are useful for treating various mammalian haemoglobin are sectived disorders such as sportes injuries procession in any benefit from enhanced local immune system cell infilturation. This sequence tepresents a human PRO polymucleotide of the invention. This sequence degates, implemented the proliferation of interpretation of

in the formation, differentiation and maintenance of multicallular conganisms. The fermation of many individual cells (ce example profiler of many individual cells (ce example proliferation, organisms. The fate of many individual cells (ce example proliferation, migration or differentiation) is typically governed by information is received from other cells and the immediate environment. The information is often transmitted by secreted polypoptides (for example mitogenic factors, survival factors, cyctotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors or membrane bound proteins. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or tenating at tumour in a mammal. In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present

in the formation, tenter to mover mutically across encourable to the formation, differentiation and maintenance of multicellular corganisms. The fate of many individual cells (for example proliferation, or organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information is often transmitted by secreted polypeptides (for example mitogenic factors, auryival factors, cytotocas, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention in proteins, along with the cDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal. In addition, they may be useful for measuring or
